

Function definition → generated form; live code mode

```
from openhcs.core.memory import numpy

@numpy
def paper_rescale_signal(
    image,
    gain: float=1.2,
    offset: float=0.0,
):
    """Rescale image intensities with a
    gain and offset.

    gain: Multiplicative intensity
    scale.
    offset: Constant added after
    scaling.
    """
    return image * gain + offset
```

The same editor also exposes

Live editable Python

```
pattern = [
    (percentile_normalize, {
        'low_percentile': 1.0,
        'high_percentile': 99.8,
        'target_min': 0.0,
        'target_max': 255.0,
        'enabled': True
    })
]
```

Normalization example (different function)

The same declaration also supplies the agent-facing catalog

gain: float = 1.2

Multiplicative intensity scale.

offset: float = 0.0

Constant added after scaling.

Declaration-derived controls and catalog • editable Python uses the same workflow
