Measurement-first autonomous 3D localisation

XY

XZ

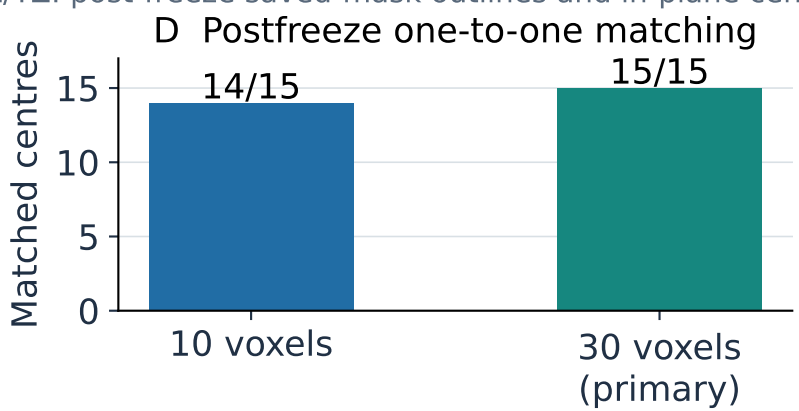

Y = 157 voxels

YZ

X = 80 voxels

XY: native saved nuclear ROIs, not validated cell borders.
XZ/YZ: post-freeze saved-mask outlines and in-plane centres.

26 candidate centres

Mean matched error: 4.80 voxels

11 predictions unmatched to annotations

Annotation completeness is unestablished; unmatched does not mean biologically false

One scientific method • technical rerun only • localisation, not boundary accuracy
