Three independent blind analyses recover both drug responses

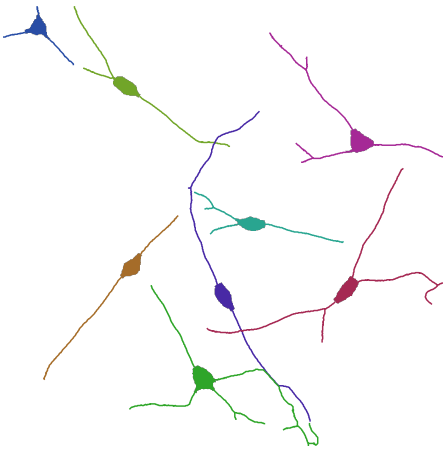

Each agent: 20 wells; two technical wells per dose. Curves use each drug's DMSO control.

Public-field comparison: initial OpenHCS and published NeuronCyto II results

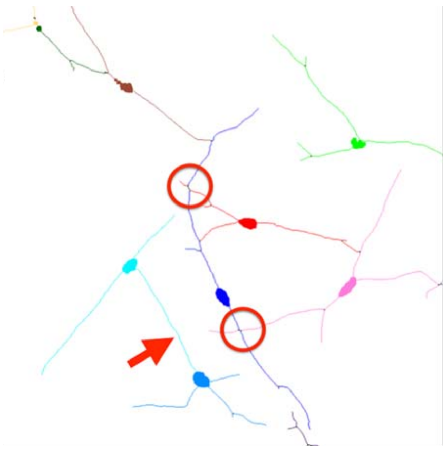

C Raw field

D Initial OpenHCS tracing

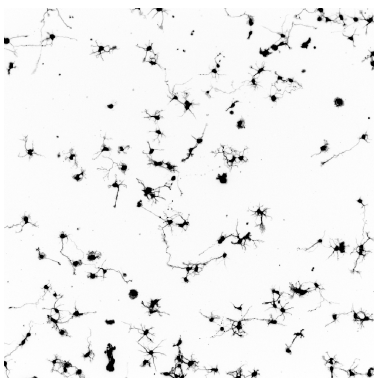

E Published NeuronCyto II

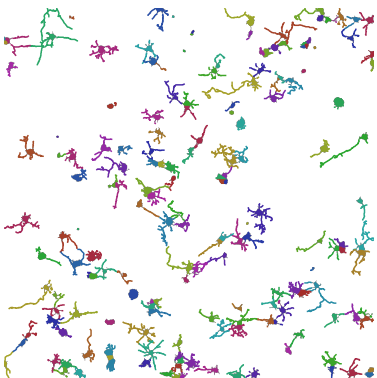

E: published algorithm output, not manual tracing. Ong et al., Fig. 2D; CC BY-NC 4.0.

Separate laboratory tracing demonstration (not analyses 1–3 above)

F Raw neurite channel

G Cell bodies and neurites

H Overlay on raw image
