

# From an editable workflow to prepared execution

## A Resolve the submitted workflow

Pipeline settings  
+ step parameters

Resolved settings for every step  
Selected wells and image locations

## B Match images and connect step inputs

Channel + Z  
image groups

labels

## C Plan storage and ordered processing

Results:  
keep in memory / save

If time is sequential:

## D Check requirements and assign devices

● Parameters

● Image groups

● Array backends

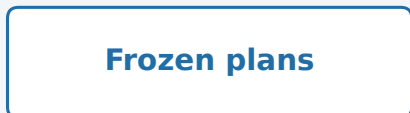

Declared requirements

CPU / GPU  
assignment

## E Prepare execution tasks

Execution bundle → run the analysis
