

Edit one analysis through forms, Python or MCP

A Main window: the complete workflow

NeuronCyto II workflow • two function steps

C Function controls

This screenshot shows the configuration interface for the 'percentile_normalize' function. It includes a 'Reset' button and a list of parameters with their current values and 'Reset' buttons: 'Low Percentile' is 1, 'High Percentile' is 99.8, 'Target Min' is 0, and 'Target Max' is 255. The interface is clean and uses a dark theme.

D Matching Python code

```
pattern = [
    (percentile_normalize, {
        'low_percentile': 1.0,
        'high_percentile': 99.8,
        'target_min': 0.0,
        'target_max': 255.0,
        'enabled': True
    })
]
```

B Recorded MCP edits

The same parameters, in the same order, with the same values
