

Volumetric localisation and body separation

Autonomous repair of a continuous-body split

A Unchanged raw image

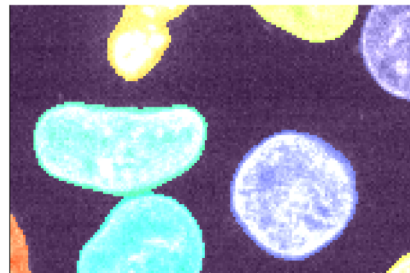

B First instance labels

C Repaired instance labels

D Repaired labels + raw

Same XY viewport, Z index 36; categorical colours are not shared IDs.

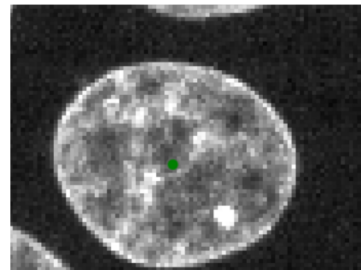

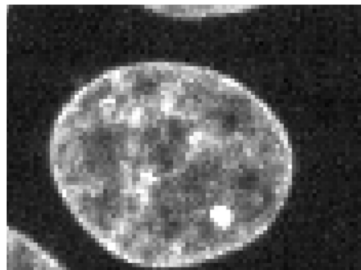

Local partition repair, not proof of complete volume segmentation.

Volume detection: ordinary-body support and unresolved identity

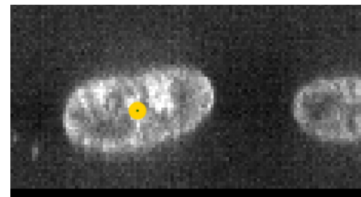

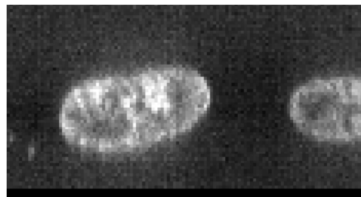

Raw source

Final body-centre point on raw source

A XY · one centre within a textured continuous body

B XZ · central body reviewed through depth

C YZ · one assigned centre, unresolved multi-lobed identity
