Instructions guide the agent from question to analysis

1 Biological brief

Question
Measurements
Image acquisition

2 Inspect inputs

Channels and scale
Bright/dim regions
Centres / borders

3 Build and run

Choose methods
Set parameters
Run the analysis

Run and inspect the revision

4 Check the result

Raw and overlay
Matched regions
Objects and values

5 Repair and recheck

Find faulty step
Revise and rerun
Inspect regions

6 Finalize and deliver

Analysis settings
Images and tables
Checks and limits

The scientist checks images and measurements, and can edit the analysis
