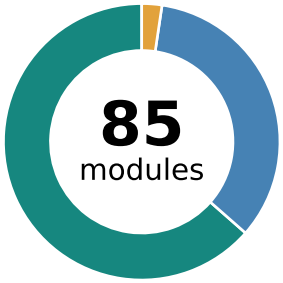
A How modules were tested



In 30 workflows: 54

Individual tests: 29

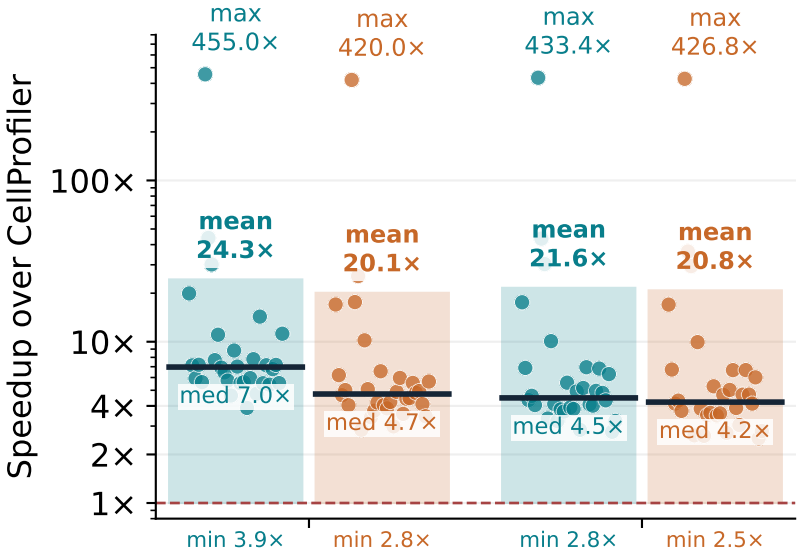
Shared code only: 2

Import checks only: 0

No tests: 0

Each module counted once. Shared-code tests do not test the module's own algorithm.

B One worker · measured times

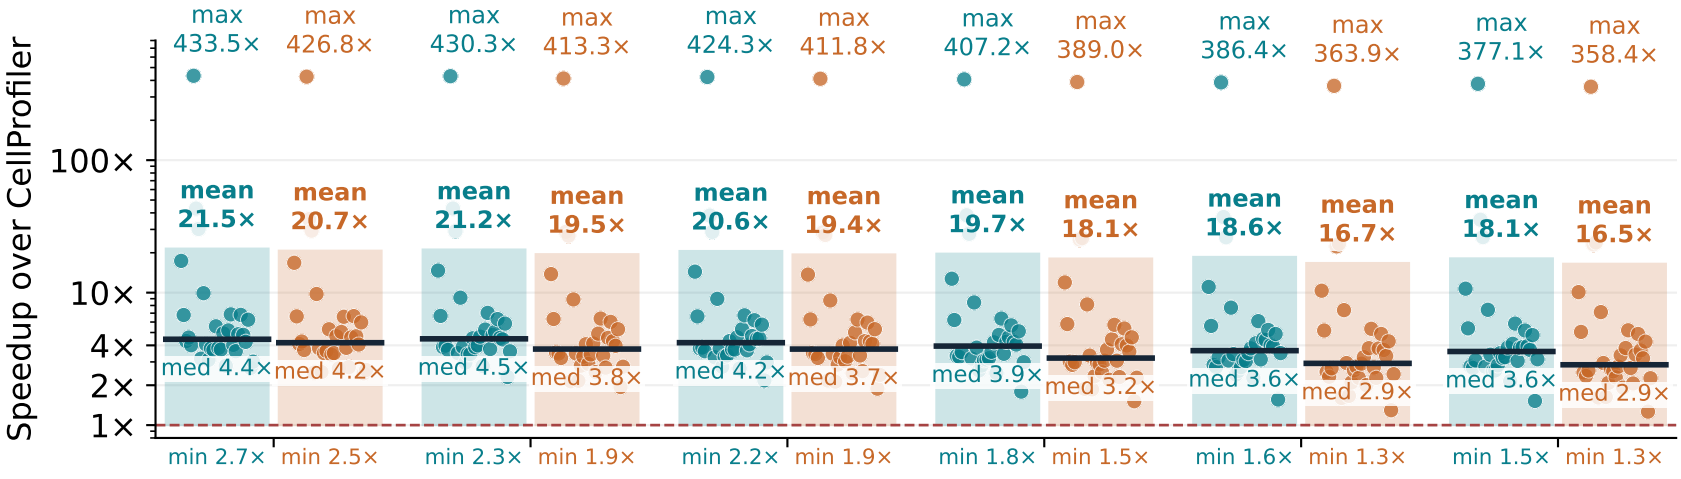


Each dot is one workflow (30 per distribution)

Time per sample; OpenHCS median of three runs

C Same cores and samples

OpenHCS measured · CellProfiler estimated, assuming ideal parallel execution



Same workload and core count for both applications

Processing · Setup + processing · Mean bars · Median
