B Add a laboratory method; edit its settings in a form or Python

Define the method in Python

```python
from openhcs.core.memory import numpy

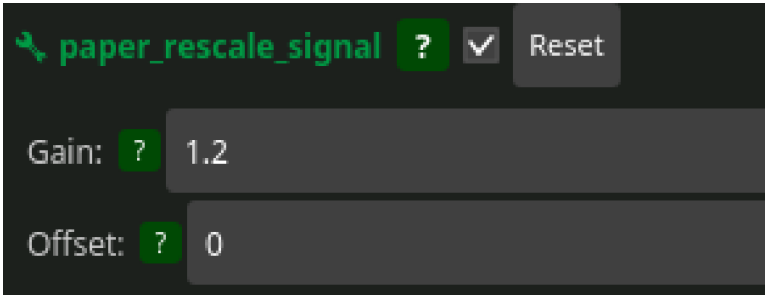

@numpy
def paper_rescale_signal(
    image,
    gain: float=1.2,
    offset: float=0.0,
):
    """Rescale image intensities with a
    gain and offset.

    gain: Multiplicative intensity
    scale.
    offset: Constant added after
    scaling.
    """
    return image * gain + offset
```

Documentation from the function definition

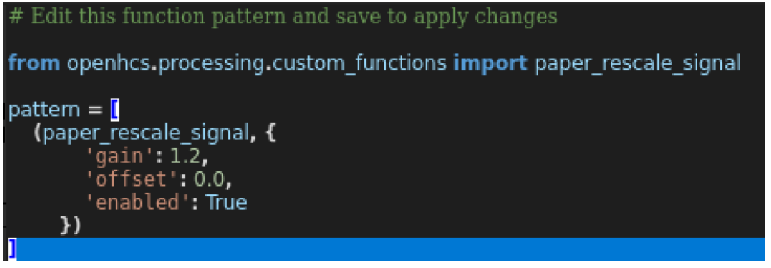

Register

Adjust settings in a generated form

The same function and parameters

Or edit the same settings in Python

Native form and code • OpenHCS 0.8.7

Agents receive the same parameter descriptions

`gain: float = 1.2`

Multiplicative intensity scale.

`offset: float = 0.0`

Constant added after scaling.

One function definition supplies the controls, editable Python and agent descriptions
